Codecademy, Scrimba

## TECHNICAL SKILLS

|            |            |            |            |
|------------|------------|------------|------------|
| Frameworks | Vue.js     | Next.js    | React      |
| Languages  | TypeScript | JavaScript | CSS        |
| State      | Pinia      | Vuex       |            |
| Testing    | Vitest     | Jest       |            |
| Styling    | Tailwind   | Bootstrap  | PrimeVue   |
| API's      | REST       | Apollo     | WebSockets |
| Tools      | Git        | Figma      |            |

## EXPERIENCE

### Front-End Developer

AnyTask.com | Feb 2023 — Present

Developed and maintained a large-scale Vue application serving 15,000+ users across 140+ countries, contributing to architecture improvements, new features and a full platform UI redesign.

- Migrated the app from Vue 2 to Vue 3
- Collaborated within a small agile team on feature planning, UI design and architecture decisions.
- Replaced Vuex with Pinia, simplifying state management and improving application architecture.
- Introduced component testing with Vitest for UI components, API logic and form validation.
- Built a real-time messaging system using WebSocket subscriptions with threaded conversations, read receipts and uploads.
- Improved performance through lazy loading, debounced search queries and API optimisation.
- Built a customisable dashboard with draggable and resizable widgets for messages, notifications and user data.
- Implemented Algolia-powered search with filtering, sorting and pagination.
- Built and maintained 50+ reusable Vue components forming a scalable UI system.
- Led a platform-wide UI redesign in Figma across mobile, tablet and desktop.
